

1979 Crumar General Development System

GDS Shimmers

GDS Shimmers was the first patch programmed in the voice editor when the full system was returned to working order for the first time in many years during major restoration in late 2014.

It is one of only three known working examples in the world.

As a souvenir of this special event, the sound was captured and faithfully multi-sampled in Kontakt.

The GDS was a derivative of the Bell Labs Alles Machine and was the groundbreaking 32 oscillator digital synthesizer to directly form the basis of the DK Synergy.

Standalone Installation:

To run this download in Kontakt 4.2.4 or above simply unzip the archive and run GDS Shimmers in the instrument folder.

Please note a copy of the Synergenesis manual is included in the download as the instrument shares the same user interface and synth engine as the main Synergenesis library.

Merged Update for Synergenesis Customers:

A further 8 bonus layered multis are included for Synergenesis customers. To install the extra instruments and samples, merge the contents of the folders in the download with the existing respective folders within the main Synergenesis folder.
