

Phoenix Mystic Sopranos

Thank you for purchasing **Phoenix Mystic Sopranos** by ImagikSound. This is the second product of the new ImagikSound line. This vocal library is based on five soprano singers ensemble sampled at 96kHz and 24 bit. The range is the typical C3-C5 soprano extension of 2 octaves. Every note is sampled with about 20 seconds of time duration, that it's the normal duration of a professional singer, so no looped note is present but the three very low volume drones that you can hear at the end of the sopranos notes. You can save and load the configuration presets. The only articulation is the long sustain, you could obtain "fake" staccato or spiccato handle with the envelope. There are 10 example presets just to show you the various possibilities of transforming the basic samples. Only the filter, flanger, delay and formant morphing have the bypass switches upon the knobs. Be careful when you are handling the Filter, Flanger, Morph and Mystic knobs because the peaks, just adjust the main Gain knob. Though there's a Limiter in the instruments, some frequencies could over the threshold.

We hope you enjoy the instrument as we hope you will be nice to tag us when you use it in a video or audio demo on the web.

Cheers

System Requirements

This library requires Native Instruments Kontakt Full version 6.3.0 or later. The sample files are compressed to lossless in 96kHz and 24bit NCW audio format. Please read all instrument specs and software requirements before purchasing an ImagikSound product. Many instrument presets in this library are extremely system resource intensive. We highly recommend that you have at least 4GB of system ram, a multi-core cpu and an 7200 rpm SATA or SSD hard disk before purchasing this particular ImagikSound library. Large sample sets like those found in this library and a massive amount of effect parameters may load slowly and may cause system instability on the computers and to the DAW. You must have at least Windows version 7 or later, or Apple OSX 10.10 or later.
