

Hello, thanks for purchasing "Aquatica" for AudioThing Noises.

"Aquatica" is a collection of four sample banks (Another Tone, Aquatica, Atmospheres 1, Atmospheres 2) made to expand the sonic territory of this plugin into the soundscapes realm, focusing on the water world.

The Aquatica folder offers high quality field recordings of ocean, sea, splashes, drops, rain, stream and similar, made to be combined with the other three tonal banks.

All tonal samples are tuned to C and can be easily transposed to allow Noises to produce tuned atmospheres. An included collection of 48 presets, 12 for each sample category, is a starting point to enjoy the beauty of these endlessly evolving samples.

All samples are in Wav 48/24 format, with written loop points, and can be seamlessly used in any other software/daw of your choice.

Greetings from Soundethers
