

ABOUT THE INSTRUMENT

Shake is a comprehensive collection of 95 shakers, tambourines, rattles, and bells from all over the world. This deep and stylistically expansive sample library focuses on dynamic live percussion performances by British instrumentalist and media composer David Oliver. Shake has everything you need for your next composition, including tiny soft plastic and raw hide egg shakers, filled ping pong ball rattle, raw hide, plastic and wooden maracas, small and medium sized instruments made from natural materials such as reeds, seed pods, gourds, vines, rattan, coconuts, nut shells, bamboo, wood and metal. There are also many unique instruments made or improvised by David like the bamboo rainstick shaker, mung bean shaker, cocktail stick shaker and pad box multi effect shaker (a flat wooden box containing ball bearings) and multiple Caxixi combinations. With our intuitive multi-layered modular UI, you'll enjoy complete freedom to mix, layer, affect and customize each sound to your heart's content.

David recorded masses of live performed grooves, fills, flourishes, rolls, and individually sampled hits. Shake includes African, Latin American, Indian, and World instruments with powerfully authentic and spirited recordings that are carefully hand-crafted for effortless use in films, games, and any genre of music that needs shaker.

David meticulously selected this bundle of highly recordable instruments amongst the most sonic and dynamically useful shakers from his grand collection. He recorded them all multiple times, slicing the extended performances into the best 2 bar seamless loops in time signatures of 3-4, 4-4, 5-4 6-8 and 7-8, at intervals of 20bpm from 80bpm to 140bpm and whole sets of maraca patterns in 4-4 with tempos from 160bpm to 280bpm.

The built-in loop browser lets you filter your search by style and instrument keywords, tempo and time signature and you can even star your favorite loops for instant recall. Once you load your loops into the slot grid, you can tweak each loop down to the individual transient slice, with playback direction, slice order, ADSR and custom step-automation sequencing for volume, pitch, pan, filter cutoff and resonance parameters that you can freely draw with your mouse.

CREATIVE CONTROL FEATURES

We've packed the user interface with powerful sound-shaping controls to give you complete flexibility. The master preset contains every sample in the library and a host of powerful expression features. There are 4 independent sound layers, each with a full set of parameters that can be linked, automated and customized. These include swell, attack, start offset, release (with pad-mode), vibrato, filter, coarse and fine pitch, sound bank selection, and crossfader assignment.

Next, we used various sound-design tricks to morph the sounds from our journey into tonal and dissonant pads, synth-tones and ambient dreamscapes. You'll find these in the Layer 3 (Ambience) sound menu. They can be played by themselves, or used to add texture and body to the primary sounds in Layers 1 and 2. Lastly, the Sub-Synth layer is a basic synthesizer with 10 shapes that can be added for transient and tonal support.

In the advanced settings pull-down window, you'll also find an adaptable per-layer LFO system, with selectable LFO shape, modulation target parameter, speed, intensity, tempo-syncing and fade-in time. You can also apply your choice of 13 lowpass, high-pass and FX filters, with assignable modulation targets such as velocity, mod-wheel, expression, after-touch, key position and step-sequencer table control. .

Our customizable arpeggiator features a built-in velocity sequencer table and control over arp direction, note timing, swing, randomization and duration. We've also included a key and scale lock system that allows you to constrain your notes to a wide variety of common scales and keys for easy melodic composition and live performance.

The built-in modular FX rack window offers 18 different DSP effect modules that you can assign in any of 10 available slots, in any order that you wish. You'll find classic phase, flanger, delay, distortion, amp and cab simulators, compressors, EQ, rotator and so much more. The Reverb effect includes **99** of our own convolution reverb impulse presets. We've captured a huge variety of different rooms, halls, chambers and outdoor environments, along with **40** unique, strange and creative special effect impulses to completely transform the sound and open up whole new worlds of musical possibility.

SOUNDIRON

DAVID OLIVER

David Oliver is an esteemed percussionist known for his brilliant and expressive soundtrack work on numerous award winning films and television programs.

Working from his studio in Somerset, UK, he has an intuitively inventive approach which first brought him to the attention of multiple award winning composer William Goodchild in 2012. David went on to create rhythm ensemble recordings for **National Geographic** wildlife documentary **Ultimate Honey Badger**.

It was a fruitful first collaboration and received the highest number of Nat Geo views in its category in the history of the channel in 2014 (Earth Touch News Network Jan 9 2014).

This was the start of a string of award winning collaborations notably **Africa's Giant Killers** (BBC Natural World 2015) and **Jago: A Life Underwater** (James Morgan Films, co-Directed by James Reed 2015) - Winner of Jackson Hole Grand Teton Award and Wildscreen Panda Award 2016. Other collaborations of note include with Emmy award winning composer Barnaby Taylor for **Elephant Family And Me** (BBC Natural World - 2016) and **Ghost of the Mountain** (Disney Nature - 2017).

David is an avid rhythmic explorer who has made a number of his own percussion instruments such as UDU, bamboo slit drums, rainsticks and waterdrums. He is a keen proponent of music for well being and regularly performs live.

David conceived the idea of a multi-stemmed library of organic rhythmic combinations in the summer of 2016 following conversations with prominent composers wishing to harness his sounds and performances at their fingertips.

He invited the Soundiron team to collaborate In the Spring of 2017. Together they formulated the scope of the project to maximize its creative potential to ensure optimum versatility and functionality in Kontakt and deliver a unique and exciting bundle of world rhythmic loops to inspire your musical creativity.

See www.davidolivermusic.com for more details.

SHAKE

SOUNDIRON

David Oliver's SHAKE

Version
2.0

- 10 Multi-sample NKI instrument banks in Kontakt 6 Player format
- 11 Loop NKI instruments banks in Kontakt 6 Player format
- 35 Ambience patches created from the source content
- 26,504 stereo samples
- 7.41 GB Installed (10.1 GB Uncompressed)
- 24-bit, 48 kHz Stereo Lossless NCW Format for Kontakt presets
- Flexible and intuitive multi-layer user interface controls, with LFO, filter, legato, and arpeggiator

Shake has been licensed for use in the free Kontakt Player, virtual instrument engine. It can be used in Kontakt Player or the full retail version of Kontakt (version 6.1 or later) for VST, AU or AAX instrument plugin formats. You can add this product to the Kontakt “Libraries” browser. It requires online serial number registration through Native Instruments’ Native Access app. This library is fully compatible with Complete Kontrol and all S-Series Keyboards by Native Instruments. Buying this library automatically qualifies you for a great cross-grade discount toward the full unlocked version of Kontakt through Native Instruments!

SOUNDIRON

SYSTEM REQUIREMENTS

This library requires Native Instruments **Kontakt Player version 6.1 or later**, or the full retail version of **Kontakt version 6.1 or later**. The sample files are compressed to lossless 48kHz and 24 bit NCW audio format. Please read all instrument specs and software requirements before purchasing this or any other Soundiron products. **You must have at least Windows version 7 or later, or macOS 10.12 or later.**

Many instrument presets in this library are extremely system resource intensive. We highly recommend that you have a 64-bit operating system (Windows or macOS) with at least 3GB of system ram, a multi-core cpu and a 7200 rpm SATA or SSD hard disk before purchasing this particular Soundiron library. Large sample sets like those found in this library may load slowly and may cause system instability on some older machines and audio devices.

FIDELITY

Natural sonic impurities from body and clothing movement by the performer sounds may be present in some samples. These performance sounds are natural and unavoidable. Therefore, please keep in mind that this library isn't designed to provide perfectly sterile results. Our goal is to preserve and accentuate the natural live qualities in our instruments without sucking all of the life out of them for the sake of clinical perfection.

1. If you don't already have Kontakt 6 or the Kontakt Player installed, download the Free Kontakt Player (WIN / macOS) from the Native Instruments website. You need Kontakt or Kontakt Player version 6.1 or later to use this library:

<http://www.nativeinstruments.com/kontakt>

2. Please download the library from our server and unpack it completely before trying to install it. You can find full instructions in the download email we send you after your purchase.

3. Make sure all instances of Kontakt are closed and launch Native Access. It is a special program that is automatically installed by Kontakt. Once it is open, find the "Add a serial" button and click it.

4. Next, copy your serial number from the download or serial number email we sent you after your purchase. This registration process is necessary to allow Kontakt and the NI Native Access to activate the product. You usually only need to do this the first time you add and activate this Library.

5. On the next screen after registering your serial number, click the Browse button to the right of the library name. This will allow you to select the folder location that you chose to install this library on your hard drive. Select the folder and then press INSTALL on the next screen to complete the process.

6. Exit Native Access and launch Kontakt. Go to the "Libraries" tab in the Kontakt browser window, located in the upper left area of Kontakt window, just to the right of the "files" tab. You should see this library as a new tile in the Libraries window.

7. You can find the instrument presets by clicking the Instruments button on this library's tile in the Libraries window. You can also browse and load the included .nki presets using the Files, Quick-Load or Database browser windows in Kontakt, or through the main File load/save menu.

8. Please allow any current preset to finish loading completely before loading a new one.

David Oliver's

SOUNDIRON

KONTAKT INSTRUMENT HEADER

The top area of the user interface includes default instrument controls that are common to all Kontakt instruments.

1. Open Instrument Editor

Click to view and edit the internal settings and programming of this instrument. Be careful making changes unless you're an experienced Kontakt user, as changes here can easily break the entire instrument.

2. Close Main Control Area

Click the Soundiron emblem to collapse the "Performance View" and only show the Kontakt Instrument header Bar, as seen above.

3. MIDI Input

Click the down arrow to route the audio from this instrument to select a midi input source. By default, you can choose "Omni" to allow the instrument to respond to midi messages and notes on any midi channel, or you can choose a specific midi channel number to control the instrument.

4. Output

Click the down arrow to route the audio from this instrument to any available Kontakt plugin output. You can adjust Output mix and Insert FX settings by showing the main Output window in Kontakt at the bottom of Kontakt (press F2).

5. Memory Use Display

This displays the amount of system RAM used by the samples and other data required by this instrument.

6. Voice Count / Max Limit

Displays the number of voices currently playing and the max number that may play before being automatically culled. High voice-counts can slow down your CPU and cause crackling and other issues. The safe number of voices varies greatly based on other programs running, core-count/speed of your CPU, available RAM, disk speed and other factors.

7. Purge

This menu allows you to purge samples from RAM or reload them.

8. Mute

This mutes the instrument.

9. Pan Slider

This pans the output left or right in the stereo field.

10. Main Volume Slider

This controls the output volume for the instrument.

11. Performance View

This button collapses the "Performance View" to only show the instrument header bar, as seen above.

12. Auxiliary Sends

This opens the Auxiliary Send mixer, allowing you to route signal to the Aux Sends in the main Kontakt Mixer window (press F2).

13. Minimize All

This collapses the entire instrument UI down to a thin strip.

14. Close Button

This closes and removes the instrument from the rack.

15. Signal Meters

This displays the current signal level during playback.

16. Tune Knob

This controls the global pitch by semitone increments up to +/-36. Hold the shift key down while dragging the knob to adjust pitch in 1-cent (1/100th of a semitone). This is separate from the layer pitch settings in the instrument UI.

17. Solo Button

This solos the instrument and mutes all others.

18. Snapshots

This allows you to save and load snapshot presets for this instrument. Click the "i" button to close.

19. Previous / Next Preset

These arrows let you skip to the previous or next available preset within the same folder. Be aware that any settings you've changed will be lost, so we recommend saving a snapshot after making any changes if you wish to be able to load them again later.

20. Preset Name

This shows the currently loaded preset name.

MAIN USER INTERFACE

1. Advanced Control Tab

Click on this pull-down tab to open the advanced control window for access to the LFO, Filter and Arpeggiator systems (See pages 8 and 9).

2. Layer Select

This selects a layer's controls for editing. The lower control area displays the knobs and control settings for the currently selected layer. However, if the selected layer has its lock engaged, any changes to the knobs will effect all other locked layers as well.

3. Layer Activate

This enables a layer to play. Each layer can be independently enabled or disabled, allowing up to 4 layers to play at once.

4. Layer Lock

This links the (Swell, Attack, Offset, Release, Vibrato and Filter settings for all layers that have their lock button activated. Changing the knob values for one layer applies the same change to all other locked layers. This setting doesn't effect the Invert Swell, Release Mode, Filter Type, Pitch or Articulation Selection Menu settings for each layer.

5. Swell Knob

This controls the volume of the layer, with smooth real-time tonal and dynamic attenuation.

6. Value Display

This shows/hides the knob-control-value displays below the knobs when they are not needed.

7. Attack Knob

This controls the note attack shape. Turning this up causes the sound to fade in more gradually. This is useful for softening hard transients and taming aggressive articulations.

8. Offset Knob

This cuts into the sample start, allowing sample playback to skip past the beginning of the sound. You can use this to make the sound more pad-like or to remove hard transient starts, especially when combined with the Attack knob. It's also great for creating glitchy effects.

David Oliver's
SHAKE

SOUNDIRON

Continued on next page...

9. Release Mode

This is mainly used for sustaining articulations and long notes. In Normal mode, notes fade out quickly as soon as they're released. In Pad mode, the range of the Release knob is multiplied, allowing much longer fade-out times. This control is independent of the layer lock function.

10. Release Time Knob

This controls the duration of the release. Lower values cause the sound to fade out more quickly after a note is released, while higher values fade the sound out more slowly.

11. Vibrato Knob

This applies basic vibrato to the sound. It is separate from the LFO controls in the Advanced Control window.

12. Pan Knob

This controls the pan, allowing you to spatialize the sound to your liking between the left and right channels.

13. Pitch Coarse & Fine

These nested knobs control semitone and cent tuning for the current layer. The outer knob shifts the pitch in semitone increments by up to +/- 36 semitones. The inner knob shifts the pitch in cent (1/100th semitone) increments by up to +/- 50 cents (1/2 semitone). Use this to shift octaves, create chords with other layers or fine-tune the sound of each layer. This control is independent of the layer lock function.

14. Pitch Display Values

These read-outs show the pitch of the current layer in semitone and cent +/- offset values. The upper box shows semitone value of the outer pitch knob. The lower box shows the cent value for the inner pitch knob. A value of 0 will play the articulation at its natural pitch at middle C. A value below 0 means that the sound has been pitched down, while a value above 0 means the sound is pitched up. This control is independent of the layer lock function.

15. Select Articulation

This allows you to choose the articulation for the current layer. Each layer has its own independent menu. The articulation menus are not effected by the layer lock function.

16. X-Fade Assign Buttons

These buttons assign the currently selected Layer to the X-Fade slider. This allows you to create custom combinations of layers which you can easily and smoothly crossfade between.

17. Articulation Next/Previous

These buttons allow you to quickly and easily jump to the next or previous articulation for the current layer.

18. X-Fade Slider

This smoothly crossfades between layers A and B. Drag the glowing indicator horizontally to blend between layers. Note that this will have no effect on layers that are assigned to "none" in the X-FADE ASSIGN section for the layer.

19. Sub-Synth Layer Select

This selects the synthesizer layer, with a choice of 6 basic synthesizer waveform shapes. The sub-synth layer can be used to add bass, reinforce the tone of percussive and atmospheric sounds and to create new sonic combinations with other layers.

Tips

Offset allows sample playback to start later than the sample's beginning, which means playback can begin in the middle of a waveform. This naturally can cause a pop or snap to occur. When using the offset control, we recommend also adjusting the Attack to prevent popping, unless you would like to create sharp, glitchy effects.

Layering: You can create unique musical and tonal combinations by combining different articulations from multiple layers. We love experimenting with creative control settings, like pitching one layer up or down an octave to create octave layering, or using the sub synth layer to reinforce note tonality or extreme bass presence.

Automation: You can automate layer articulation selection changes in real-time by Right-Clicking (PC) or Command-Clicking (macOS) on the articulation menu. Or you can open the Auto" browser panel on the left side of Kontakt, then click on an Midi CC or Host Automation ID number you wish to assign to a control and drag it onto the knob, menu or button in the UI that you wish to automate. In fact, nearly every control and menu can be automated with either of these same methods.

ADVANCED CONTROL WINDOW

The advanced control window can be opened and closed by clicking on the Pull-down tab's down-arrows at the top of the UI. It contains the per layer LFO, Filter and Arpeggiation systems. The global Keyswitches button turns off all keyswitches, allowing you to access a greater range of playable notes. The global Purge Unused Samples unloads all samples for layers that are currently turned off.

LFO

LFO button

This engages the LFO system.

Waveform buttons & menu

Click the shape buttons or use the down-arrow menu to choose an LFO wave shape. You can choose between Sine, Square, Triangle, Saw-tooth and Random.

Target menu

Use this to assign the LFO to these parameters: Volume, Bass, Treble, Pitch, Pan, Filter Resonance and Frequency.

LFO lock button

This locks the LFO speed to your DAW's tempo when Kontakt's BPM "EXT" button is off. If the EXT button is on, this will lock to Kontakt's internal BPM setting.

Time / Beat knob

This controls the speed of the LFO. When locked, the Beat knob selects note length values. When unlocked, the speed is measured in milliseconds.

Intens. knob

This controls the intensity of the LFO oscillation.

Fade knob

Use this to fade in the oscillation after the note starts.

FILTER

Filter button

This engages the Filter system.

Type menu

Select from 13 different filter types with this menu.

Source menu

Select from 12 different sources for the filter with this menu, or set it to none.

Step sequencer table

Adjustable from 2 - 32 steps by either clicking the number to the right to type in a value or clicking on the number and dragging it up or down. This table is only active when Target is set to Graph Frequency or Graph Resonance. The table plays from left to right.

Reso. knob

This controls the amount of resonance applied to the filter.

Freq. knob

This sets the cut-off frequency for the filter in each source window.

Invert button

This button inverts the action of the filter modulation.

SCALE LOCK

Lock button

Click the lock icon next to the SCALE LOCK label to turn on the key/scale locking system. This allows you to easily play within a desired key and scale. When active, the midi keys that are excluded from the current scale will trigger the same note as the key below them, so go ahead and be sloppy if you'd like!

Key menu

This menu selects the key that you wish to constrain all incoming midi notes to.

Scale menu

This menu lets you select from a variety of scales, in the key that you have selected.

ARPEGGIATOR

The "ARP" section lets you create, save and load your own arpeggios, rhythmic patterns and step sequences. To turn it on, click the radio button next to the ARP label.

ARP button

This turns the arpeggiator on and off.

Preset menu

Use this menu to select and load any of our factory arpeggiator presets.

Save button

This "disk" icon button allows you to save and export your ARP settings to an nka preset file.

Load button

This "folder" icon allows you to import and load your previously saved Arp panel settings from an nka file.

Velocity Graph table

Use the graph to draw the velocity for each step in your desired arpeggio sequence. The table plays from left to right. The button on the right enables the graph. When this graph is off, the pattern will use the velocities of the incoming midi notes as you play.

Preset menu

This menu controls the Arpeggiator hold mode.

- Normal sets it to respond only while a note is pressed, cycling through all held notes as it arpeggiates.
- Hold sets it to automatically sustain one note at a time, (monophonic) so that changing keys changes the note that is repeating.
- Hold +/- sets it to allow new notes to be added to the automated chain of repeats.

Table Steps value

This setting determines the number of velocity steps that will be cycled through in the sequence. You can change the value by double clicking the number or clicking and dragging it up or down.

SWING knob

This adds pre-beat or post-beat swing to the arpeggiated rhythm.

RAND. knob

This knob applies natural variability to the speed and velocity values.

DUR. knob

This allows the duration of notes to be shortened or extended without changing the overall timing.

DIR. knob

The Direction menu controls the arp direction and behavior, with 14 different patterns to choose from: Up, Down, Up-Down, Down-Up, Zig-Zag Up, Zig-Zag Down, Zig-Zag Up-Down, Zig-Zag Down-Up, Move-In, Move-Out, In & Out, Out & In, EZ-Roll, Random and As Played.

To automate the DIR. menu in real-time, you can right click (PC) or command click (Mac) on the menu. Then click the "Learn Midi CC# automation" pop-up button and move the midi controller that you wish to assign.

BEAT menu

This menu lets you choose the note time, with quarter note, triplet, 8th note, 8th triplet, 16th note and 16th triplet.

LOOPS USER INTERFACE

David Oliver's
SHAKE

The top **Loop Slots** area includes 48 slots that you can load loops into. Each slot has persistent settings, including per-slice parameters, time/tempo sync engine, slot order, filter settings, ADSR envelope controls and access to the Loop FX chain, Browser window and selectable FX. Check out the following pages for detailed descriptions for each control and menu. There are special keyswitches that you can also use with this preset to control loop selection, playback and individual slice triggering.

LOOP CONTROLS

This area includes the main waveform display, slice parameter graphs, value displays and the loop browser controls. These settings are saved with the loop, allowing each loop to have its own persistent settings.

VOL knob

This controls the volume of the currently loaded loop.

WAVEFORM window

This displays the waveform for the current loop and allows you to select individual slices of the beat.

VOLUME step sequencer graph button

This shows the volume graph in the Waveform window.

RESONANCE step sequencer graph button

This shows the filter resonance graph in the Waveform window.

CUTOFF step sequencer graph button

This shows the filter frequency cutoff graph in the Waveform.

PITCH step sequencer graph button

This shows the pitch graph in the Waveform window.

PAN step sequencer graph button

This button shows the pan graph in the Waveform window.

VALUE display

This shows the current slice value for the currently shown parameter graph (Volume, Pitch, Pan, Cutoff, Resonance).

SLICE Number

This display shows the currently selected slice number.

QUICK DRAW button

This opens the quick draw graph for the current parameter.

QUICK DRAW graph

This pop-up window lets you quickly draw across all steps for the current parameter graph with your mouse.

NEXT/PREVIOUS LOOP arrows

These left and right arrow buttons let you load the next or previous available loop.

BROWSER menu button

This button shows you the currently loaded loop. Clicking it opens up the loop browser window. **See Page 13 for details.**

LOOP SLOTS grid

This preset grid includes 48 loop slots that you can load with any of the many loops included in the Browser's loop list. To change the loop assignment for one of the slots, click on the slot number and then choose a new loop from the Browser.

MACRO menu

This menu provides several time-saving macros:

- **Fill All Slots Randomly** assigns a random loop to all slots.
- **Randomize Slice Volume** applies random Volume values to all of the slices in the current loop slot.
- **Randomize Slice Pitch** applies random Pitch values to all of the slices in the currently loaded loop slot.
- **Randomize Slice Pan** applies random Pan values to all of the slices in the currently loaded loop slot.
- **Randomize Slice Cutoff** applies random Filter Cutoff values to all of the slices in the current loop slot.
- **Randomize Slice Resonance** applies random Resonance values to all slices in the currently loaded loop slot.

MAIN LOOP CONTROLS

This part of the GUI includes the loop engine playback options, filter, effects, and ADSR controls.

BEAT / SYNC tempo lock mode switch

This selects the Kontakt tempo-syncing engine mode to use.

- **Sync** mode stretches slices based on the tempo, so there are no gaps between slices. This works best for complex rhythms and tempos slower than the original loop tempo. However, using this mode with rhythmically simple loops and tempos more than 25% slower or 10% faster than the natural loop tempo are likely to result in glitches, stuttering effects and other unpredictable results. It also requires more system resources.
- **Beat** mode separates slices and locks them to tempo without changing the speed of each slice. This works best for simple rhythms at tempos close to the original loop tempo. However, complex loops and tempos more than 10% slower or faster than the natural tempo are likely to result in uneven or unpredictable results. This can work well for simple rhythms at tempos close to the original loop tempo. However, rhythmically complex loops and tempos more than 10% slower or 25% faster than the natural loop tempo are likely to produce undesirable results.

PLAYBACK DIRECTION switch

This controls sample playback direction. FWD lays the sample in the normal forward direction. REV plays the loop audio back in reverse.

SLICE ORDER menu

This menu selects slice playback order, allowing you to play slices from first-to-last, last-to-first or in random order.

FILTER ON / OFF button

This radio button turns the loop filter on or off.

FILTER TYPE menu

You can choose between 12 filter types to apply to the loop.

LOOP SETTINGS MACRO menu

This menu provides several time-saving macros:

- **Copy Options** copies all of the Loop engine, filter and time settings.
- Once you Copy Options and then select another loop in the Loop Slots grid, a **Paste Options** item will appear in the macro menu, allowing you to paste your copied settings from one loop to another.
- **Copy Options To All Slots** lets you apply your current loop settings to all Loop Slots.
- **Reset Options** returns the current loop to default.

ATTACK knob

This knob controls Attack for the slices in the current loop.

DECAY knob

This knob controls Decay time for the slices in the loop.

SUSTAIN knob

This knob controls the Sustain level for the current loop.

RELEASE knob

This knob controls the slice Release time for the loop.

PAN slider

This controls the stereo pan position for the slices in the current loop.

ADSR macros (in Loop Browser Menu)

The Loop Browser menu also features these time-saving macros for ADSR controls:

- **Copy ADSR** copies all of the Loop ADSR settings.
- Once you Copy ADSR and then select another loop in the Loop Slots grid, a **Paste ADSR** item will appear in the macro menu, allowing you to paste your copied ADSR knob values from one loop to another.
- **Copy ADSR To All Slots** lets you apply your current loop ADSR knob values to all Loop Slots.
- **Reset ADSR** returns the current loop ADSR values to default.

LOOP BROWSER

The Loops presets feature hundreds of loops in a range of different tempos. The Loops Browser makes it easy to quickly preview and search for loops by any of the 9 tempos from 60 to 220. You can also mark loops as favorites for easy recall. To open the Loop Browser, click on the magnifying glass or the name of the currently selected loop just below the “**LOOP BROWSER**” label.

ROOT TEMPO FILTER TAG buttons

These tag buttons allow you to filter the displayed loops down to specific tempos from 70 bpm to 165 bpm.

LOOPS list window

This list shows all available loops, depending on the filter settings. The first value in the loop's name is the loop number. The last value is the bpm.

PREVIOUS / NEXT Page arrow buttons

These buttons let you skip between pages in the browser.

SELECT button

This loads the currently selected Loop into the currently selected Loop Slot. This will automatically exit the Loop Browser.

CANCEL

This closes the Browser window without changing the current Loop Slot's loop selection. You can also close the Loop Browser by clicking on the X on the right side above the Loops List window.

ADD-TO-FAVORITES star button

Click this to add the loop to your Favorites list for easy recall.

LOOP FX CONTROLS

The Loops presets includes the LOOP FX area that allows you to apply various effects to each individual loop slot. You can choose any effect for the first 6 slots in the FX chain. Simply click on the tab and choose from the drop-down list to select the effect type you wish to plug into that slot. To turn the effect on or off, click the radio button.

BUS COMPRESSOR button

Clicking this tab shows the Bus Compressor controls. Turning on the radio button activates the effect.

- **Threshold knob** - This adjusts the signal threshold needed before compression is applied.
- **Ratio knob** - This controls the ratio of gain added or removed based on incoming signal level above the threshold.
- **Attack knob** - This controls the compressor attack speed once signal exceeds the threshold
- **Release knob** - This controls the release speed once signal drops below the threshold.
- **Makeup knob** - This adjusts the additional make-up gain to add to the output after compression is applied

DISTORTION button

Clicking this tab shows the Distortion controls. Turning on the radio button activates the effect.

- **Volume knob** - This sets the overall output volume.
- **Tone** - This sets the overall signal tone.
- **Drive** - This knob controls the amount of gain added.
- **Bass, Mid & Treble knobs** - These knobs control the low, mid and high frequency gain.

EQ button

Clicking this tab shows the EQ controls. Turning on the radio button activates the effect.

- **Low, Mid and Hi Frequency knobs** - These control the center frequency of the low, mid and high frequency EQ bands.
- **Low, Mid and Hi Q knobs** - These control the bandwidth of the low, mid and high frequency bands.
- **Low, Mid and Hi Frequency Gain sliders** - Use these to adjust the level of the low, mid and high EQ bands.

LOOP FX CONTROLS

ROTATOR button

Clicking this tab shows the Rotator controls. Turning on the radio button activates the effect.

- **Speed** - This knob toggles between fast & slow speaker cabinet rotation speeds.
- **Hi Acceleration** - The high frequency acceleration rate.
- **Lo Acceleration** - The low frequency acceleration rate.
- **Balance** - Controls the low/high frequency balance.
- **Distance** - Use this knob to adjust the simulated distance between the speaker and the microphone.
- **Mix** - This sets the overall wet/dry mix.

LO-FI button

Clicking this tab shows the Lo-Fi controls. Turning on the radio button activates the effect.

- **Bits knob** - This sets the level of bit depth reduction.
- **Sample Rate knob** - This sets the level of sample rate quality reduction.
- **Noise knob** - This knob adds noise to the signal.
- **Color knob** - This knob adjusts tone brightness and apparent fidelity.
- **Output knob** - This sets the overall output volume.

LIMITER button

Clicking this tab shows the Limiter controls. Turning on the radio button activates the effect.

- **In Gain** - This sets the signal input level.
- **Release** - This sets the limiter release time.
- **Output** - This sets the signal output level.

SATURATE button

Clicking this tab shows the Saturation controls. Turning on the radio button activates the effect.

- **Sat.** - This sets the amount of saturation.
- **Output** - This sets the signal output level.

STEREO button

Clicking this tab shows the Stereo controls. Turning on the radio button activates the effect.

- **Spread** - This sets the width of the stereo field.
- **Pan** - This adjusts the panning of the stereo field.
- **Output** - This sets the signal output level.

T.MASTER button

Clicking this tab shows the Transient Master controls. Turning on the radio button activates the effect.

- **Input** - This sets the signal input level.
- **Att** - This controls the attack of the volume envelope.
- **Sus** - This controls the sustain of the volume envelope.
- **Output** - This sets the signal output level.

SENDS button

Clicking this tab shows the Send FX controls, which include Delay and Convolution Reverb. Turning on the radio button activates the effect.

Delay

- **Delay send knob** - Controls how much dry signal is sent to the effect.
- **Time knob** - This controls the echo rate. In sync mode, it changes time signature by note divisions.
- **Damp knob** - This controls high frequency roll-off
- **Pan knob** - This controls the left-right ping pong effect.
- **Feedback knob** - This controls delay loop feedback
- **Return knob** - This adjusts the wet signal output level.

Reverb

- **Reverb send knob** - Controls how much dry signal is sent to the effect.
- **Delay knob** - This sets the pre-delay level.
- **Size knob** - This controls the room size.
- **Color knob** - This controls reverb tone.
- **Damp knob** - This controls high frequency roll-off.
- **Return** - This adjusts the wet signal output level.

KEYBOARD DISPLAY

The Kontakt presets display colored keys in Kontakt's keyboard view panel. To show the keyboard view, press F3 or click the window menu at the top of Kontakt. This key coloring is also shown in Native Instruments' Komplete Kontrol software and all S-Series Keyboards and other NKS Standard compatible software and hardware.

STANDARD & AMBIENCE PRESET KEYS

1. Articulation/Sound Keyswitches

Pressing one of these red keys will change currently selected articulation or sound, visible in the drop-down menus.

2. Playable Keys

These blue keys are the standard playable, chromatic keys.

3. Root Key

This turquoise key represents a given sound's natural root. The playable range above and below is stretched from this point. *Note: This is only available in some presets.

SHAKE

LOOPS PRESET KEYS

1. Articulation/Sound Keyswitches

Pressing one of these red keys will change currently selected loop slot, visible in the loop slot system above the waveform.

2. Play Loop Key

The blue key will trigger playback of the currently loaded loop.

3. Slice Keys

These green keys allow you to play individual slices of the currently loaded loop. They are sequential, left to right.

SOUNDIRON

DSP EFFECTS RACK

The FX Rack tab gives you direct access to 18 of Kontakt's built-in special effects and dynamic processors. This panel is accessible in all presets by clicking on the FX Rack tab button at the bottom of the instrument UI. Signal flows from left to right in each row and goes down from there. The last two sockets are Post Send effects, mixed in at the final stage before signal output. To change the effect loaded into any specific rack module socket, click on the down arrow menu in its top left corner.

David Oliver's
SHAKE

FX CHAIN PRESETS

Select Preset menu

This menu lets you select from any of our stock presets and any custom presets you create.

Save button

Once you've customized your FX chain, you can save it for later use in this rack by pressing this.

Fade knob

Use this to fade in the oscillation after the note starts.

Delete button

Use this to delete the currently selected custom preset. Factory presets can't be deleted.

Reset button

This unloads all effects and resets the entire FX rack to its default state.

Descriptions and control definitions for all effect modules are on the next 4 pages...

SOUNDIRON

JUMP

Power Button

Toggles the effect on/off.

Boost Button

Boosts the incoming signal strength.

Drive Knob

Controls the amount of gain added.

Tone Knob

Shapes tone brightness.

Low, Mid & High knobs

These control the low, mid and high frequency gain.

Vol Knob

Sets the overall output volume.

DISTORTION

Power Switch

Toggles the effect on/off.

Drive Knob

Controls the amount of gain added.

Damping Knob

Shapes tone brightness.

Output Knob

Sets the overall output volume.

DELAY

Power Switch

Toggles the delay on and off.

Sync Button

Syncs the rate to your BPM.

Rate Knob

Controls the echo rate. In sync-mode, it changes by note divisions.

Damping Knob

Controls high frequency roll-off.

Pan Knob

Controls the left-right ping pong effect.

Mix Knob

Adjusts the wet/dry output mix.

REVERB

Power Button

Toggles the effect on/off.

Type Menu

Selects the environment category.

Impulse Menu

Selects the impulse response. There are 139 unique reverb and FX spaces to choose from.

Size Knob

Controls the reflection decay time.

Lopass Knob

Controls high-frequency roll-off.

Hipass Knob

Controls low frequency cut-off

Mix Knob

Adjusts the wet/dry output mix.

AMP

Power Button

Toggles the effect on/off.

Drive Knob

Controls the amount of gain added.

Bass, Mid, & Treble Knobs

Controls the low, mid and high frequency gain.

Volume Knob

Sets the overall output volume.

TRANSIENT MASTER

Power Button

Toggles the effect on/off.

Attack Knob

Controls amount of signal boost/cut from attack transient.

Sustain Knob

Controls sustain volume following a transient.

Tone Knob

Shapes the brightness of the tone.

Gain Knob

Controls the amount of gain added.

CABINET

Power Button

Toggles the effect on/off.

Model Menu

Selects the model of speaker to simulate.

Damping Knob

Shapes tone brightness.

Output Knob

Sets the overall output volume.

FILTER

Power Button

Toggles the effect on/off.

Type Button

Select from dozens of low pass, high pass, band pass, notch, ladder and other filter types.

Cutoff/Talk Knob

Controls the filter cutoff and/or peak frequency.

Resonance/Sharpness Knob

Controls the amount of resonance added at the cutoff or peak node.

Gain/Size Knob

Controls signal pass-through level.

FLANGER

Power Button

Toggles the effect on/off.

Sync Button

Synchronizes the rate to your BPM.

Rate Knob

Controls the mod rate in ms or by note if Sync is on.

Feedback Knob

Adjusts the amount of feedback.

Phase Knob

Controls the phase.

Depth Knob

Controls the depth of the sweep.

COMPRESSOR

Power Button

Toggles the effect on/off.

Threshold Knob

Adjusts the signal threshold needed before compression is applied.

Ratio Knob

Controls the ratio of gain added or removed based on incoming signal level above the threshold.

Attack Knob

Controls compressor attack speed once signal exceeds threshold.

LO FI

Power Switch

Toggles the effect on/off.

Bits Knob

Sets the level of bit depth reduction.

Sample Rate Knob

Sets the level of sample rate quality reduction.

Noise Knob

Adds noise to the signal.

Color Knob

Adjusts tone brightness and apparent fidelity.

Vol Knob

Sets the overall output volume.

PHASER

Power Switch

Toggles the effect on/off.

Sync Button

Synchronizes the rate to your BPM.

Rate Knob

Controls the mod-rate, in ms or note values if Sync is on.

Feedback Knob

Adjusts the amount of feedback

Phase Knob

Controls the phase center.

Depth Knob

Controls the depth of the phase sweep.

Mix Knob

Adjusts the wet/dry output mix.

ROTATOR

Power Switch

Toggles the effect on/off.

Speed

Toggles between cabinet rotation speeds.

Size Knob

Adjusts the simulated size of the speaker cabinet.signature by note divisions.

Output Knob

Sets the overall output volume.

Air Knob

Adjusts the simulated distance between the speaker and microphone.

SKREAMER

Power Switch

Toggles the effect on/off.

Drive Knob

Controls the amount of gain added.

Tone Knob

Sets the overall signal tone.

Bass & Bright Knobs

These control low & high frequency gain.

Clean Knob

Sets the amount of clean signal pass-through.

Output Knob

Sets the overall output volume.

STEREO MODEL

Power Switch

Toggles the effect on/off.

Spread Knob

Controls the stereo width of the signal. It ranges from centered mono to ultra-wide stereo.

Pan Knob

Sets the final left-right stereo pan direction of the processed signal.

EQ

Power Switch

Toggles the effect on/off.

Low, Mid and Hi Frequency Gain sliders

These adjust the level of the low, mid and high EQ bands.

Low, Mid and High Frequency Knobs

These control the center frequency of the low, mid and high frequency EQ bands.

CHORUS

Power Switch

Toggles the effect on/off.

Sync Button

Synchronizes the rate to your BPM.

Rate Knob

Controls the mod-rate, in ms or note values if Sync is on.

Phase Knob

Controls the phase.

Depth Knob

Controls the depth of the chorus sweep.

Mix Knob

Adjusts the wet/dry output mix.

TAPE SATURATOR

Power Switch

Toggles the effect on/off.

Gain Knob

Controls the amount of gain added.

Warmth Knob

Adds tonal warmth

Rolloff Knob

Controls high frequency attenuation.

Volume Knob

Controls the overall output level.

SOUNDIRON USER SOFTWARE LICENSING AGREEMENT

LICENSE AGREEMENT

By purchasing and installing the product, you the Customer accept the following product terms.

LICENSE GRANT

The license for this product is granted only to a single individual user. No unlicensed use is permitted. All sounds, samples, programming, images, scripting, designs and text contained in this product are copyrights of Soundiron, LLC. This software is licensed, but not sold, to Customer by Soundiron, for commercial and noncommercial use in music, sound-effect creation, audio/video post-production, performance, broadcast or similar finished content-creation and production use. Individual license holders are permitted to install this library on multiple computers or other equipment only if they are the sole owner and only user of all equipment this software is installed or used on.

Soundiron LLC allows Customer to use any of the sounds and samples in library(s) that Customer has purchased for the creation and production of commercial recordings, music, sound design, post production, or other content creation without paying any additional license fees or providing source attribution to Soundiron. This license expressly forbids any unauthorized inclusion of any raw or unmixed content contained within this product into any other commercial or noncommercial sample instrument, sound effect library, synthesizer sound bank, or loop or effect library of any kind, without our express prior written consent.

This license also forbids any unauthorized transfer, resale or any other form of re-distribution of this product, or its constituent sounds or code, through any means, including but not limited to re-sampling, reverse engineering, decompiling, remixing, processing, isolating, or embedding into software or hardware of any kind, except where fully rendered and integrated into the finished soundtrack or audio mix of an audio, visual or interactive multimedia production, broadcast, live performance or finished work of sound design, with a running time no less than 8 seconds in total length. Licenses cannot be transferred or sold to another entity, without written consent of Soundiron LLC.

RIGHTS

Soundiron retains full copyright privileges and complete ownership of all recorded sounds, instrument programming, documentation and musical performances included within this product. All past and future versions of this product, including any versions published or distributed by any other entity are fully bound and covered by the terms of this agreement.

REFUNDS

Downloaded libraries can't be returned, so we do not provide refunds or exchanges. Be aware that as soon as the product has been downloaded from our servers or physically sent to the Customer, it can not be returned, exchanged or refunded.

RESPONSIBILITY

Using this product and any supplied software is at the Customer's own risk. Soundiron LLC holds no responsibility for any direct or indirect loss, harm or damage of any kind arising from any form of use of this product.

TERMS

This license agreement is effective from the moment the product is purchased or acquired by any means. The license will remain in full effect until termination by Soundiron, LLC. The license is terminated if Customer breaks any of the terms or conditions of this agreement. Upon termination you agree to destroy all copies and contents of the product at your own expense. All past, present and future versions of this product, including versions sold by companies other than Soundiron LLC, are covered under the terms of this agreement.

VIOLATION

Soundiron LLC reserves the right to prosecute piracy and defend its copyrighted works to the fullest extent of US and International civil and criminal law.

SOUNDIRON

THANK YOU!

Soundiron is a virtual instrument and sound library developer founded in 2011 by sound artists and instrument designers Mike Peaslee, Gregg Stephens and Chris Marshall. We are based in the San Francisco Bay area, in California. We are driven every day to capture all of the sonic flavors that this world has to offer. Our mission is to record them in deep detail and carefully craft them into living- breathing virtual instruments that inspire you to play and create the music and sound you hear in your heart. Each library is crafted to deliver the greatest possible realism, outstanding acoustic quality, natural real-time playability, and intuitive and flexible controls and unique sound-shaping options. We hope these tools make composition and sound design a breeze, so you can spend more time creating. If you enjoy this instrument, we hope you'll check out some of our other awesome sound libraries. If you have any questions or need anything at all, just let us know. We're always happy to hear from you at support@soundiron.com!

Thanks from the whole Soundiron team!
