

HYDRATEK

L O S T

- Cinematic Electronica Presets For Serum

• Overview & Installation:

First of all, special thanks for purchasing my first soundbank for Serum, called "L O S T". I am HydraTek, a sound designer, sound engineer & producer based in Italy, but firstly an artist *like you*. My mission is to bring you fresh inspiration for your own projects by employing my creativity and vision of sound's aesthetics.

In this particular soundbank you will find 100 presets for Xfer Records' powerhouse softsynth Serum (*latest version required*) plus some *bonuses I'll discuss later ;)

The presets are divided into 8 categories:

- Bass (20)
- Hybrid (15)
- Keys (10)
- Lead (15)
- Pad (10)
- Pluck (10)
- Seq (10)
- Sfx (10)

To add them to your arsenal you will need to open the <Menu> in the top right of the synth's toolbar, then click <Show Serum Presets folder> and drag the content of the folder "HydraTek - L O S T, Cinematic Electronica for Serum (Presets)" inside the <Presets> folder.

After that, either re-open an instance of Serum in your DAW or click on <Rescan folders on disk> under the <Menu> tab.

Now you are ready to go!

Each of the 100 presets has been carefully designed from scratch and they have a special focus on '**Cinematic Electronica**': twisted and deep basslines, crispy and saturated leads, evocative soundscapes, futuristic sci-fi sequences and distorted 'hybrid' sounds, fxs and more.. All of them have 4 macros assigned: the first three are meant for basic customization of the current patch while the fourth, the "**MUTATE**" macro, is conceived to transform the sound into something else. I encourage you to try tweaking the macros to suit the project you are working on and to experiment by automating them for bringing the sounds to life and real

expression. While the concept of this soundbank is to give a 'spacey' touch to your productions, you'll find that many presets can easily fall into *more* subgenres of electronic music and it's my hope that you will find them useful and inspiring.

- ***BONUSES :**

To celebrate my first official soundbank, I wanted to give you something extra:

- 130 handmade **samples** to showcase the presets, divided for each of the 8 aforementioned categories in "Loops" and "Shots".
- A special Serum **skin** designed by me with a sci-fi theme. (1)

(1) To install the skin just click again on <Show Serum Presets folder> under the <Menu> tab and drag the content of "HydraTek - L O S T (Skin)" inside the <Skins folder>.

IMPORTANT: The presets and samples provided are royalty-free for commercial use in your projects. Reselling or unauthorized distribution of this content is forbidden.

Happy producing! 😊
