M U T A N T

- Modern Bass Design for Vital

M U T A N T

MODERN BASS DESIGN
FOR VITAL

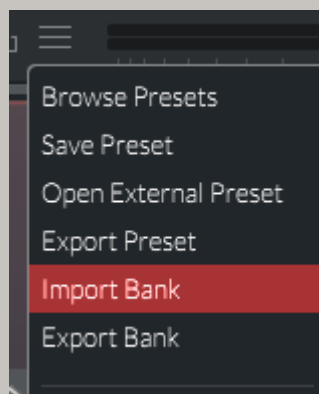

• Overview & Installation:

First of all, special thanks for purchasing my second soundbank made for Vital, called "M U T A N T". I am HydraTek, a sound designer, sound engineer & producer based in Italy, but firstmostly an artist *like you*.

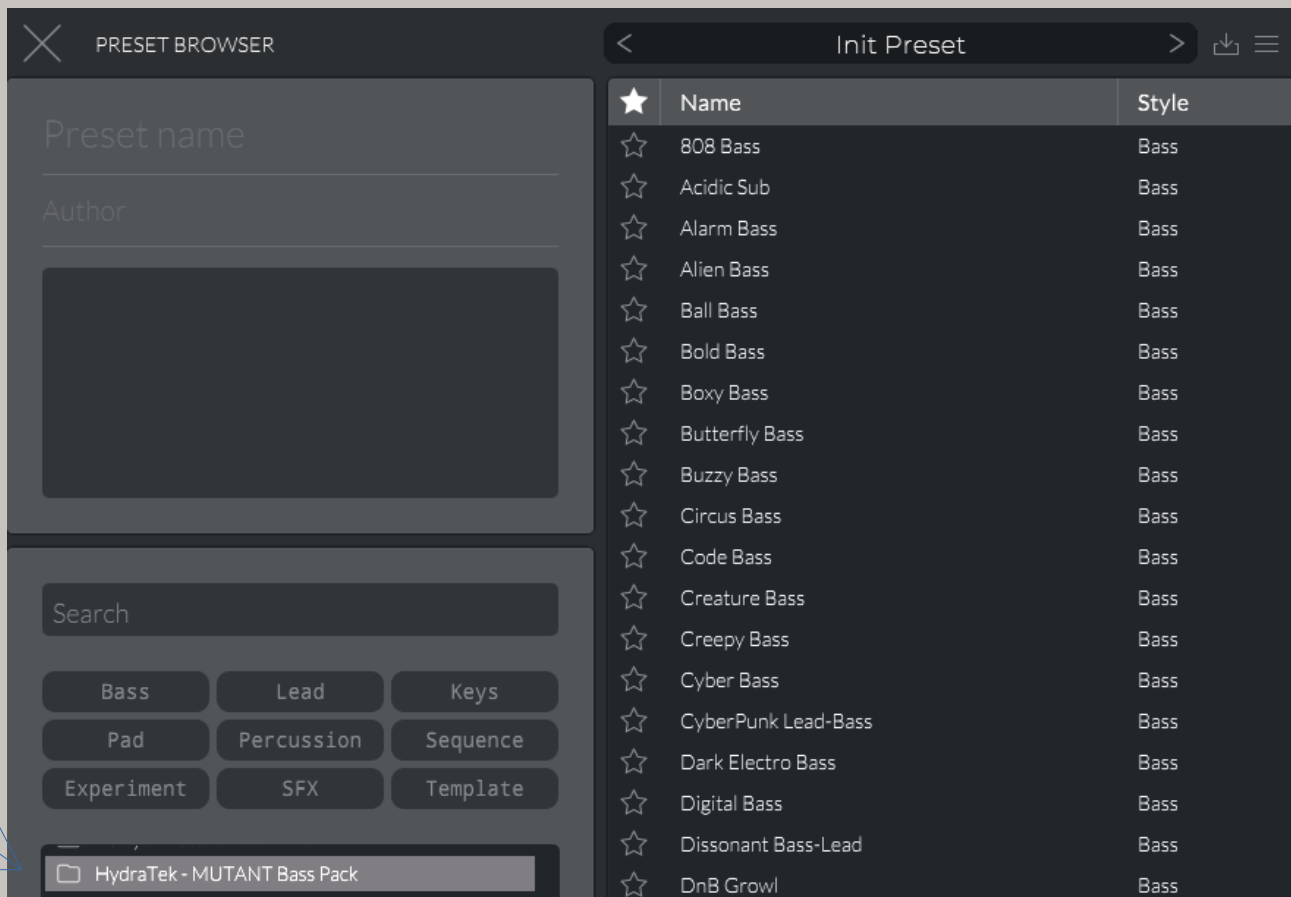

My mission is to bring you fresh inspiration for your own projects by employing my creativity and vision of sound's aesthetics.

In this soundbank you will find 101 **presets** for the free version of Vital Audio's Vital softsynth, all dedicated to *Bass*! Plus, as a bonus, 101 processed **bass loops** made with those presets to showcase how they can be employed and a special custom Vital **skin**!

To install the presets I've provided both the individual presets and a file called 'HydraTek – MUTANT.vitalbank': inside of Vital, in the open menu you need to click 'Import Bank' and choose that file:

After that, the presets will be installed in your documents folder and can be accessed in the preset browser from here in the synth:

Each of the 101 presets has been carefully designed from scratch in order to have a special focus on '**Modern Bass Music**': having provided a cybernetic and high-tech nature to them, they can instantly bring your tracks to the *future*, whether you produce Drum & Bass or Bass House, Industrial Techno or CyberPunk and so on.. As you can hear from the demo, many of those can easily be used as leads, plucks or even blend into pads and drones. The only limit is your imagination! Special thanks to Stephan Scholz, who once again helped me making the demo mix of my soundpack.

All of the presets have 4 *macros* assigned: three of them are meant for basic customization of the current patch while the fourth, the "**TENSION**" macro, is conceived to add instability and is particularly effective when automated to create tension during transitions and passages in your productions.

Although I've tried my best to make them 'mix-ready' straight from the synth, I encourage you to *tweak* the macros to suit the project you are working on, to experiment by automating them for bringing the sounds to life and, if you like to get deeper, to add a custom processing chain to the sounds even out of Vital as I did for the samples provided or resample them.

To install the special vital skin I made for this pack, first of all make sure you have the latest version of the free Vital synth, then navigate to the 'advanced' tab and click at the bottom where you see 'skin' to open a menu that asks you to load a custom skin and choose the file called 'HydraTek - MUTANT.vitalskin':

IMPORTANT: The presets and samples provided are royalty-free for commercial use in your projects. Reselling or unauthorized distribution of this content is forbidden.

Until next time..

Happy producing! 😊
