

Thanks a lot for your purchase!

First of all, I would like to tell you a little about myself:

My name is Josue Arias, I'm a musician, sound engineer and sound designer.

From a very young age my passion was sound and the search for inspiring and musical timbres.

I began this search with my first synthesizer, a Korg MS-10 in 1979 when I was 8 and since then my entire life has been crossed and driven by music and sound.

Recently I decided to share this part of my passion with all of you, sharing sounds from my studio "Kymátika", built entirely with natural materials, mud, wood and straw, and nestled in the forests of Patagonia.

From this place is where I continue to explore and experimenting with acoustic and electronic instruments.

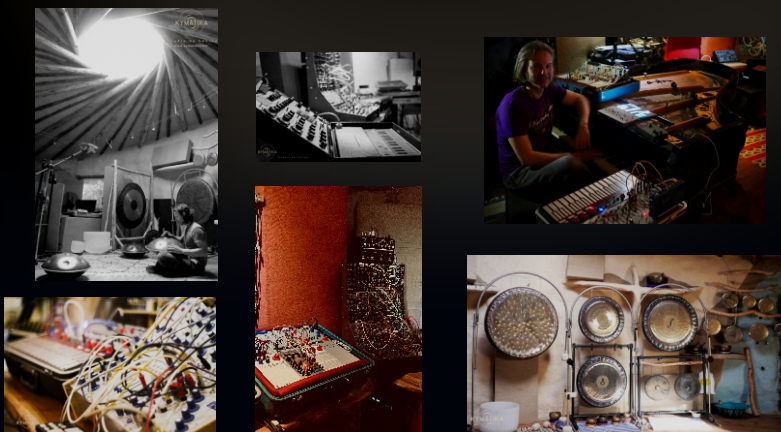

I wish you can enjoy these sounds, and that they serve you as much as they do for me:

to inspire you in your compositions, to push your creativity and helping you express through music.

How to install the presets:

For use the "Analog Essence" presets, drag the folder to the "Third Party" folder for Diva.

This folder can be found by clicking in the Presets tab inside of Diva, right clicking on your "Third Party" folder, and clicking 'reveal in Finder' for MacOS or 'Show in explorer' in Windows.
