

Drum Machine 626 Custom: Linn, LM-1, DMX & 707 Edition

This library is based on a hardware-modified Roland TR-626 drum machine. In addition to the original factory bank, the unit has been expanded with sounds from the LM-1, LinnDrum, DMX, and TR-707 via hardware ROM expansion.

Each of the 90 sounds was recorded in all 15 available Pitch positions (from -7 to +7). This approach captures the natural tonal shifts and digital aliasing artifacts of the hardware pitch-shifting architecture.

The master source material was recorded at 24-bit / 192kHz using RME and Ferrofish converters. To ensure maximum compatibility and flexibility, the entire library was then resampled into 96kHz and 48kHz versions.

Content & Specifications:

- **Total Audio Files:** 1,350 One-Shots + 80 Loops.
- **Format:** PCM Wav Mono, 24-bit (Separate 96kHz and 48kHz versions included).
- **Bank Structure (Inside Edition folders):**
 - *Classic 626 Bank:* Full factory sound set.
 - *Expansion A & B Banks:* Selected sound sets from LM-1, LinnDrum, DMX, and TR-707 as provided by the hardware modification.

Battery 4 Patches (Separate 48kHz and 96kHz banks):

Includes 5 dedicated kits mapping all main sounds at their default hardware pitch (0), with pre-mapped multi-pitch variations for the Toms:

- Classic 626.nbkt
- LM-1.nbkt
- LinnDrum.nbkt
- DMX.nbkt
- 707.nbkt

Bonus Content (Preview Loops):

- **80 Drum Loops (24-bit / 48kHz):** Designed as an audio preview to demonstrate how these hardware sounds sit in a produced rhythm track.
- Each loop features sounds from a single drum machine per pattern. The rhythmic patterns are closely matched across different machines to let you hear and compare their unique sonic characters, with variations tailored to each machine's specific architecture.
- **Two Versions Provided:**
 - *40 Raw Loops:* Pure, clean hardware tone (peak-limited for safe gain levels).
 - *40 Processed Loops:* Enhanced with minimal studio processing for a mix-ready feel.
