

Moonleads – Cherry Audio CA2600

Price: €13

Genres: Cinematic, progressive rock, sci-fi themed

Presets walkthrough video: https://youtu.be/E_FEOTSBBsI

Moonleads consists of 50 vintage lead legato synths for Cherry Audio CA2600 synthesizer influenced by some famous musicians of 70's and early 80's. Most of them are fat in the low register of the keyboard, gritty in the middle register and singing in the higher ones.

For almost all of them there are some crazy modulations manipulating the sound to add a pretty much experimental dimension to the sonic result.

They fit for progressive rock, sci-fi themed cinematic music and other experimental forms of musical expression.

Presets were designed with **CA2600 1.4.0 (Build 104)** and run best with this or newer edition
