

By VINAI

The XTT by VINAI is a multiband compressor with upwards and downwards compression.

The main feature of the plugin are the five adjustable frequency bands to apply different amounts of compression to different frequency ranges. The five bands can be used individually to tune the threshold that determines the intensity of the compression.

Each band has a section to control the specifics for that particular band. Solo it, mute it adjust the RMS, the attack and the release or tilt the mid/side information of the selected band.

LOGO

The XTT logo acts as a bypass control for the whole plugin, and is smoothed to be click and pop free for unhindered A/B testing.

LIMITER: Turn it on and boost the signal into the brickwall limiter.

MIX

The mix feature acts as a common mix control for the whole plugin. This allows for parallel usage.

UPWARD & DOWNWARD COMPRESSION

Turn the knob to the right to compress more.

TIME

Scales up the attack and the release times of the compression of the different bands.

INPUT & OUTPUT

The input and output sliders allow you to control the input and the output volume of the plugin.

LINK

Link the input and output volume. When one goes up, one goes down.
