

Empty Fields - F.2 for Omnisphere 2 will be an ongoing project with 10 releases in a one year timespan. Each release will contain 50 - 70 new patches, 10 - 20 multis and it will use a hybrid setup with using both new recorded material and using soundsources from the Omnisphere 2 core library.

You pay a one time price of €75,00 and you will receive automatically each new release. If you are joining in later you will get all the previous released packs. As this is a new setup I will offer a 90 days, not good/money back option.

With this ongoing project I want to capture the ever changing beauty of these Empty Fields and let myself inspire to create and record on a monthly base new material.

On the 3rd of September I have released an update for version 2.5 – Please check the next page for updated installation instructions and how to choose your correct version.

All the presets from pack 1 till 5 are been converted to the new 2.5 setup and the majority of presets now use 3 or 4 oscillators. The original 2 layers have not been changed and you can “revert” back to the old patch by disabling layer 3 and/or 4.

All the presets have now also received a proper use of categories and tagging according to the Spectrasonics setup.

New packs will have the option to be installed in the new main Empty Fields – F.2 V25 folder.

However I will also provide the option to install the packs separate, both with a 2.5 version or the old 2.4 version

Installation – important

To install the original (2.4 version)

Unzip the EmptyFieldsF2Packs and open Omnisphere 2. Under the “Utility” button click “Install .omnisphere” and select the .omnisphere file one by one to install each pack. This installs Empty Fields F2 as it was originally created with the “custom” categories and this version is compatible with Omnisphere 2.4

You have to install each pack separately and it will create a folder for each Pack within Omnisphere 2. **Please note that these presets have a different category setup then the usual Omnisphere presets. This has changed for the 2.5 version, but I maintained the original categories as I started for the 2.4 version and all these packs will have the same setup.**

To install the V25 version (2.5 version)

Unzip the EmptyFieldsF2V25.zip and open Omnisphere 2. Under the “Utility” button click “Install .omnisphere” and select the .omnisphere file. This installs all the current 5 packs into one folder within Omnisphere 2 and future releases will be able to be updated into this folder. **Please note this version requires Omnisphere 2.5 to be used. This pack will always contain all the packs that have been released so far. On the 31 Oktober that is pack 1 - 7**

Updating this release with new packs:

When you receive a new pack release for the V25 version, it will also have the name Empty Fields - F2 V25.omnisphere but this will contain only the new files from the new packs. Installing this file will update your soundset without overwriting the already installed presets.

If you purchased a separate pack

To install the original version, unzip the EmptyFieldsF2Pack1/2/3/4/5/6/7 folder which is compatible with 2.4

To install the new V25 version, unzip the EmptyFieldsF2P1/2/3/4/5/6/7V25 which is compatible with 2.5

Open Omnisphere 2. Under the “Utility” button click “Install .omnisphere” and select the .omnisphere file
