

Dreamer is a soundset for Omnisphere 2.5 and Keyscape. The soundset contains 128 presets, 25 multis and 70 soundsources and is 300mb in size.

Requirements: Omnisphere 2.5.1d + Keyscape 1.1.2c + Keyscape Soundsources v1.0.2

Please note that the Keyscape soundsources are quite big in size and loading can sometimes take a little longer than usual, this is also the case with the multis.

The set is a scoring tool for Omnisphere 2.5 and Keyscape. The basic of the presets are simple and with the use of the 2 extra layers of Omnisphere 2.5 all kinds of elements are added to the presets to enhance the sounds. The soundset is aimed for composers and producers working in the film, game and library music industry and as well for worship musicians.

Installation:

Unzip the Dreamer.zip file and open Omnisphere 2. Click on the “Utility” button and navigate to install.omnisphere. Navigate to the location where you unzipped the Dreamer.zip file and select the Dreamer.omnisphere file.

You can also check a small video I made on how to install .omnisphere file here:

Usage

The soundset contains presets in the following categories:

ARP + BPM
Hits and Bits
Keyboards
Pads + Strings
Synth Bass
Synth Mono
Textures Playable
Textures Soundscape

Most of the presets are controlled via the modwheel, aftertouch and the pitchwheel. Pitchwheel is often used to control different types of modulation sources. On the synth mono patches the pitchwheel is used as normal for pitchbending.

The Keyscape soundsources can be very cpu demanding. I have tested them extensively and tried to keep every patch to its minimum in usage. If you face however problems on same patches, then reduce the amount of voices in the main tab to 8

Multis:

There are 2 kind of multis in the soundset, Stacked Mode and Live Mode. For the Live Mode I made a selection of presets that blend or work nicely together. Putting on all layers can be very demanding for your computer though I avoided them to max out the system.
